

## Rat Left/Right Determination Factor 1 (LEFTY1) CLIA Kit | LEFTY1 clia kit

Rat Left/Right Determination Factor 1 (LEFTY1) CLIA Kit

CATALOG #  
**AAA130028**

REACTIVITY  
**Rat**

### PRODUCT SYNONYMS

Left/Right Determination Factor 1 (LEFTY1); Rat Left/Right Determination Factor 1 (LEFTY1) CLIA Kit; LEFTY-B; LEFTYB; LEFT-B; LEFTB; Left Right Determination Factor B; LEFTY1 clia kit

### PRODUCT SPECIFICATIONS

| Reactivity                                        | Rat                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| Specificity                                       | This assay has high sensitivity and excellent specificity for detection of Left/Right Determination Factor 1 (LEFTY1). No significant cross-reactivity or interference between Left/Right Determination Factor 1 (LEFTY1) and analogues was observed.                                                                                                                                                                                                                                      |
| Sequence Length                                   | 366                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| Assay Type                                        | Double-antibody Sandwich                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

| Inter-Assay                                       | CV<12%                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| Preparation and Storage                           | The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than 5% within the expiration date under appropriate storage condition.<br>To minimize extra influence on the performance, operation procedures and lab conditions, especially room temperature, air humidity, incubator temperature should be strictly controlled. It is also strongly suggested that the whole assay is performed by the same operator from the beginning to the end. |

| Related Product Information for LEFTY1 clia kit | The microplate provided in this kit has been pre-coated with an antibody specific to Left/Right Determination Factor 1 (LEFTY1). Standards or samples are then added to the appropriate microplate wells with a biotin-conjugated antibody specific to Left/Right Determination Factor 1 (LEFTY1). Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. Then the mixture of substrate A and B is added to generate glow light emission kinetics. Upon plate development, the intensity of the emitted light is proportional to the Left/Right Determination Factor 1 (LEFTY1) level in the sample or standard.; |
| Product Categories/Family for LEFTY1 clia kit   | Neuroscience                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
