

Chicken Secretory Immunoglobulin A (sIgA) ELISA Kit | sIgA elisa kit

Chicken Secretory Immunoglobulin A (sIgA) ELISA Kit

CATALOG # AAA137347	REACTIVITY Chicken
-------------------------------	------------------------------

PRODUCT SYNONYMS

Secretory Immunoglobulin A (sIgA); Chicken Secretory Immunoglobulin A (sIgA) ELISA Kit; S-IgA; sIgA elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Chicken
Specificity	This assay has high sensitivity and excellent specificity for detection of sIgA. No significant cross-reactivity or interference between sIgA and analogues was observed.
Assay Type	Competitive Inhibition
Samples	Serum, Plasma and other biological fluids
Detection Range	617.3-50,000pg/mL
Sensitivity	297.2pg/mL
Intra-assay Precision	Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level sIgA were tested 20 times on one plate, respectively. Intra-Assay: CV<10%
Inter-assay Precision	Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level sIgA were tested on 3 different plates, 8 replicates in each plate. CV(%) = SD/meanX100. Inter-Assay: CV<12%
Preparation and Storage	The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than 5% within the expiration date under appropriate storage condition. To minimize extra influence on the performance, operation procedures and lab conditions, especially room temperature, air humidity, incubator temperature should be strictly controlled. It is also strongly suggested that the whole assay is performed by the same operator from the beginning to the end.

ADDITIONAL INFORMATION

Related Product Information for sIgA elisa kit	Principle of the Assay: This assay employs the competitive inhibition enzyme immunoassay technique. A monoclonal antibody specific to sIgA has been pre-coated onto a microplate. A competitive inhibition reaction is launched between biotin labeled sIgA and unlabeled sIgA (Standards or samples) with the pre-coated antibody specific to sIgA. After incubation the unbound conjugate is washed off. Next, avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. The amount of bound HRP conjugate is reverse proportional to the concentration of sIgA in the sample. After addition of the substrate solution, the intensity of color developed is reverse proportional to the concentration of sIgA in the sample.
--	---

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
