

## Rabbit Prolactin (PRL) ELISA Kit | PRL elisa kit

Rabbit Prolactin (PRL) ELISA Kit

CATALOG #  
**AAA137704**

REACTIVITY  
**Rabbit**

### PRODUCT SYNONYMS

Prolactin (PRL); Rabbit Prolactin (PRL) ELISA Kit; LTH; Luteotropic Hormone; PRL elisa kit

### PRODUCT SPECIFICATIONS

|                                                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

| Reactivity                                        | Rabbit                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| Specificity                                       | This assay has high sensitivity and excellent specificity for detection of Prolactin (PRL). No significant cross-reactivity or interference between Prolactin (PRL) and analogues was observed.                                                                                                                                                                                                                                                                                            |
| Sequence Length                                   | 227                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| Assay Type                                        | Competitive Inhibition                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| Samples                                           | Serum, Plasma, Tissue homogenates, Cell lysates, Cell culture supernates and other biological fluids                                                                                                                                                                                                                                                                                                                                                                                       |
| Detection Range                                   | 2.47-200ng/mL                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| Sensitivity                                       | 0.95ng/mL                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| Application                                       | Enzyme-linked immunosorbent assay for Antigen Detection.                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| Intra-assay Precision (Precision within an assay) | 3 samples with low, middle and high level Prolactin (PRL) were tested 20 times on one plate, respectively.                                                                                                                                                                                                                                                                                                                                                                                 |
| Inter-assay Precision (Precision between assays)  | 3 samples with low, middle and high level Prolactin (PRL) were tested on 3 different plates, 8 replicates in each plate.                                                                                                                                                                                                                                                                                                                                                                   |
| CV(%) =                                           | SD/meanX100                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

| Inter-Assay                                       | CV<12%                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| Preparation and Storage                           | The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than 5% within the expiration date under appropriate storage condition.<br>To minimize extra influence on the performance, operation procedures and lab conditions, especially room temperature, air humidity, incubator temperature should be strictly controlled. It is also strongly suggested that the whole assay is performed by the same operator from the beginning to the end. |

| Related Product Information for PRL elisa kit | This assay employs the competitive inhibition enzyme immunoassay technique. A monoclonal antibody specific to Prolactin (PRL) has been pre-coated onto a microplate. A competitive inhibition reaction is launched between biotin labeled Prolactin (PRL) and unlabeled Prolactin (PRL) (Standards or samples) with the pre-coated antibody specific to Prolactin (PRL). After incubation the unbound conjugate is washed off. Next, avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. The amount of bound HRP conjugate is reverse proportional to the concentration of Prolactin (PRL) in the sample. After addition of the substrate solution, the intensity of color developed is reverse proportional to the concentration of Prolactin (PRL) in the sample. |
| Product Categories/Family for PRL elisa kit   | Endocrinology; Reproductive science; Genetic science; Hormone metabolism                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
