

## Human Secretagogin (SCGN) ELISA Kit | SCGN elisa kit

Human Secretagogin (SCGN) ELISA Kit

CATALOG #  
AAA138266

REACTIVITY  
Human

### PRODUCT SYNONYMS

Secretagogin (SCGN); Human Secretagogin (SCGN) ELISA Kit; SECRET; SEGN; CALBL; Calbindin-Like; Secretagogin; EF-Hand Calcium Binding Protein; SCGN elisa kit

### PRODUCT SPECIFICATIONS

|                                                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

| Reactivity                                        | Human                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| Specificity                                       | This assay has high sensitivity and excellent specificity for detection of Secretagogin (SCGN). No significant cross-reactivity or interference between Secretagogin (SCGN) and analogues was observed.                                                                                                                                                                                                                                                                                    |
| Sequence Length                                   | 276                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

| Inter-Assay                                       | CV<12%                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| Preparation and Storage                           | The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than 5% within the expiration date under appropriate storage condition.<br>To minimize extra influence on the performance, operation procedures and lab conditions, especially room temperature, air humidity, incubator temperature should be strictly controlled. It is also strongly suggested that the whole assay is performed by the same operator from the beginning to the end. |

| Related Product Information for SCGN elisa kit | The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate provided in this kit has been pre-coated with an antibody specific to Secretagogin (SCGN). Standards or samples are then added to the appropriate microtiter plate wells with a biotin-conjugated antibody specific to Secretagogin (SCGN). Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added, only those wells that contain Secretagogin (SCGN), biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450nm ± 10nm. The concentration of Secretagogin (SCGN) in the samples is then determined by comparing the O.D. of the samples to the standard curve. |
| Product Categories/Family for SCGN elisa kit   | Metabolic pathway                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
