

## Human Proteasome Activator Subunit 3 (PSME3) ELISA Kit | PSME3 elisa kit

Human Proteasome Activator Subunit 3 (PSME3) ELISA Kit

CATALOG #  
**AAA139410**

REACTIVITY  
**Human**

### PRODUCT SYNONYMS

Proteasome Activator Subunit 3 (PSME3); Human Proteasome Activator Subunit 3 (PSME3) ELISA Kit; Ki; PA28G; REG-GAMMA; 11S regulator complex subunit gamma; Activator of multicatalytic protease subunit 3; Ki nuclear autoantigen; Proteasome activator 28 subunit gamma; PSME3 elisa kit

| Reactivity                                        | Human                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| Specificity                                       | This assay has high sensitivity and excellent specificity for detection of Proteasome Activator Subunit 3 (PSME3). No significant cross-reactivity or interference between Proteasome Activator Subunit 3 (PSME3) and analogues was observed.                                                                                                                                                                                                                                              |
| Sequence Length                                   | 265                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

| Inter-Assay                                       | CV<12%                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| Preparation and Storage                           | The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than 5% within the expiration date under appropriate storage condition.<br>To minimize extra influence on the performance, operation procedures and lab conditions, especially room temperature, air humidity, incubator temperature should be strictly controlled. It is also strongly suggested that the whole assay is performed by the same operator from the beginning to the end. |

| Related Product Information for PSME3 elisa kit | The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate provided in this kit has been pre-coated with an antibody specific to Proteasome Activator Subunit 3 (PSME3). Standards or samples are then added to the appropriate microtiter plate wells with a biotin-conjugated antibody specific to Proteasome Activator Subunit 3 (PSME3). Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added, only those wells that contain Proteasome Activator Subunit 3 (PSME3), biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450nm ± 10nm. The concentration of Proteasome Activator Subunit 3 (PSME3) in the samples is then determined by comparing the O.D. of the samples to the standard curve. |
| Product Categories/Family for PSME3 elisa kit   | Enzyme & Kinase                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
