

Human Neutral Sphingomyelinase Activation Associated Factor (NSMAF) ELISA Kit | NSMAF elisa kit

Human Neutral Sphingomyelinase Activation Associated Factor (NSMAF) ELISA Kit

CATALOG #
AAA140737

REACTIVITY
Human

PRODUCT SYNONYMS

Neutral Sphingomyelinase Activation Associated Factor (NSMAF); Human Neutral Sphingomyelinase Activation Associated Factor (NSMAF) ELISA Kit; FAN; Factor associated with neutral sphingomyelinase activation; NSMAF elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Human
Specificity	This assay has high sensitivity and excellent specificity for detection of Neutral Sphingomyelinase Activation Associated Factor (NSMAF). No significant cross-reactivity or interference between Neutral Sphingomyelinase Activation Associated Factor (NSMAF) and analogues was observed.
Sequence Length	948
Assay Type	Double-antibody Sandwich
Samples	Tissue homogenates, Cell lysates and other biological fluids
Detection Range	0.156-10ng/mL
Sensitivity	0.054ng/mL
Application	Enzyme-linked immunosorbent assay for Antigen Detection.
Intra-assay Precision (Precision within an assay)	3 samples with low, middle and high level Neutral Sphingomyelinase Activation Associated Factor (NSMAF) were tested 20 times on one plate, respectively.
Inter-assay Precision (Precision between assays)	3 samples with low, middle and high level Neutral Sphingomyelinase Activation Associated Factor (NSMAF) were tested on 3 different plates, 8 replicates in each plate.
CV(%) =	SD/meanX100
Intra-Assay	CV<10%
Inter-Assay	CV<12%
Preparation and Storage	The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than 5% within the expiration date under appropriate storage condition. To minimize extra influence on the performance, operation procedures and lab conditions, especially room temperature, air humidity, incubator temperature should be strictly controlled. It is also strongly suggested that the whole assay is performed by the same operator from the beginning to the end.

ADDITIONAL INFORMATION

Related Product Information for NSMAF elisa kit	The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate provided in this kit has been pre-coated with an antibody specific to Neutral Sphingomyelinase Activation Associated Factor (NSMAF). Standards or samples are then added to the appropriate microtiter plate wells with a biotin-conjugated antibody specific to Neutral Sphingomyelinase Activation Associated Factor (NSMAF). Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added, only those wells that contain Neutral Sphingomyelinase Activation Associated Factor (NSMAF), biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450nm ± 10nm. The concentration of Neutral Sphingomyelinase Activation Associated Factor (NSMAF) in the samples is then determined by comparing the O.D. of the samples to the standard curve.
Product Categories/Family for NSMAF elisa kit	Neuroscience

NCBI AND UNIPROT INFORMATION

NCBI GI #	26996553
NCBI GeneID	8439
Molecular Weight	107,314 Da
NCBI Official Full Name	Neutral sphingomyelinase (N-SMase) activation associated factor
NCBI Official Synonym Full Names	neutral sphingomyelinase (N-SMase) activation associated factor
NCBI Official Symbol	NSMAF
NCBI Official Synonym Symbols	FAN
NCBI Protein Information	protein FAN
UniProt Protein Name	Protein FAN
UniProt Gene Name	NSMAF
UniProt Synonym Gene Names	FAN; Factor associated with N-SMase activation
UniProt Entry Name	FAN_HUMAN

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
