

Human Hemoglobin (HB) CLIA Kit | HB clia kit

Human Hemoglobin (HB) CLIA Kit

CATALOG #
AAA140941

REACTIVITY
Human

PRODUCT SYNONYMS

Hemoglobin (HB); Human Hemoglobin (HB) CLIA Kit; Hgb; Haemoglobin; Heterotetramer(alpha beta)2; Heterotetramer(ab)2; HB clia kit

PRODUCT SPECIFICATIONS

Reactivity	Human
Specificity	This assay has high sensitivity and excellent specificity for detection of Hemoglobin (HB). No significant cross-reactivity or interference between Hemoglobin (HB) and analogues was observed.
Sequence Length	165
Assay Type	Competitive Inhibition
Samples	Serum, Plasma, Tissue homogenates, Erythrocyte lysates, Cell culture supernates and other biological fluids
Detection Range	1.17-300ug/mL
Sensitivity	0.42ug/mL
Application	Chemiluminescent immunoassay for Antigen Detection.
Intra-assay Precision (Precision within an assay)	3 samples with low, middle and high level Hemoglobin (HB) were tested 20 times on one plate, respectively.
Inter-assay Precision (Precision between assays)	3 samples with low, middle and high level Hemoglobin (HB) were tested on 3 different plates, 8 replicates in each plate.
CV(%) =	SD/meanX100
Intra-Assay	CV<10%
Inter-Assay	CV<12%
Preparation and Storage	The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than 5% within the expiration date under appropriate storage condition. To minimize extra influence on the performance, operation procedures and lab conditions, especially room temperature, air humidity, incubator temperature should be strictly controlled. It is also strongly suggested that the whole assay is performed by the same operator from the beginning to the end.

ADDITIONAL INFORMATION

Related Product Information for HB clia kit	The microplate provided in this kit has been pre-coated with a monoclonal antibody specific to Hemoglobin (HB). A competitive inhibition reaction is launched between biotin labeled Hemoglobin (HB) and unlabeled Hemoglobin (HB) (Standards or samples) with the pre-coated antibody specific to Hemoglobin (HB). After incubation the unbound conjugate is washed off. Next, avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. The amount of bound HRP conjugate is reverse proportional to the concentration of Hemoglobin (HB) in the sample. Then the mixture of substrate A and B is added to generate glow light emission kinetics. Upon plate development, the intensity of the emitted light is reverse proportional to the Hemoglobin (HB) level in the sample or standard.
Product Categories/Family for HB clia kit	Metabolic pathway; Infection immunity; Hematology; Neuroscience

NCBI AND UNIPROT INFORMATION

NCBI GI #	162462053
NCBI GeneID	541815
NCBI Accession #	NP_001104966.1
NCBI GenBank Nucleotide #	NM_001111496.1
NCBI Official Full Name	hemoglobin
NCBI Official Symbol	LOC541815
NCBI Protein Information	hemoglobin

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
