Sequence Length	184
Protein Type	Recombinant
Biological Significance	BAFF Receptor (BAFFR), a member of the TNFR superfamily, is highly expressed in spleen, lymph node, and resting B cells and to some extent in activated B cells, resting CD4+ cells and peripheral blood leukocytes. BAFFR is a type III transmembrane protein that binds with high specificity to BAFF (TNFSF13B). BAFFR/BAFF signaling plays a critical role in B cell survival and maturation.
Bioactivity	Determined by its ability to bind degree Ck BAFF induced mouse spleen degree Cyte survival. The expected ED50 for this effect is 2.0-4.0 ug/ml in the presence of 1.0ug/ml of human soluble BAFF.
Endotoxin Levels	Endotoxin level is less than 0.1 ng per ug (1 EU/ug)
Expression System	E Coli
Preparation and Storage	Store at 4 degree C until reconstitution. Following reconstitution aliquot and freeze at -20 degree C for long term storage. Avoid repeated freeze/thaw cycles.
