

Human Lysyl Oxidase (LOX) ELISA Kit | LOX elisa kit

Human Lysyl Oxidase (LOX) Wide-range ELISA Kit

CATALOG #
AAA147549

REACTIVITY
Human

PRODUCT SYNONYMS

Lysyl Oxidase (LOX); Human Lysyl Oxidase (LOX) Wide-range ELISA Kit; Protein-Lysine 6-Oxidase; LOX elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Human
Specificity	This assay has high sensitivity and excellent specificity for detection of LOX. No significant cross-reactivity or interference between LOX and analogues was observed.
Sequence Length	417
Assay Type	Quantitative Sandwich
Samples	Human serum, plasma, tissue homogenates, cell lysates, cell culture supernates and other biological fluids
Detection Range	1.56-100ng/mL
Sensitivity	< 0.57ng/mL
Intra-assay Precision	Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level LOX were tested 20 times on one plate, respectively. Intra-Assay: CV<10%
Inter-assay Precision	Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level LOX were tested on 3 different plates, 8 replicates in each plate. CV(%) = SD/meanX100. Inter-Assay: CV<12%
Preparation and Storage	The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than 5% within the expiration date under appropriate storage condition. To minimize extra influence on the performance, operation procedures and lab conditions, especially room temperature, air humidity, incubator temperature should be strictly controlled. It is also strongly suggested that the whole assay is performed by the same operator from the beginning to the end.

ADDITIONAL INFORMATION

Related Product Information for LOX elisa kit	Principle of the Assay: The microplate provided in this kit has been pre-coated with an antibody specific to LOX. Standards or samples are then added to the appropriate microplate wells with a biotin-conjugated antibody specific to LOX. Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added, only those wells that contain LOX, biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450nm ± 10nm. The concentration of LOX in the samples is then determined by comparing the O.D. of the samples to the standard curve. Intended Uses: The kit is a sandwich enzyme immunoassay for in vitro quantitative measurement of LOX in human serum, plasma, tissue homogenates, cell lysates, cell culture supernates and other biological fluids.
