

Chicken Luteinizing Hormone (LH) ELISA Kit | LH elisa kit

Chicken Luteinizing Hormone (LH) ELISA Kit

CATALOG #
AAA148977

REACTIVITY
Chicken

PRODUCT SYNONYMS

Luteinizing Hormone (LH); Chicken Luteinizing Hormone (LH) ELISA Kit; LH elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Chicken
Specificity	This assay has high sensitivity and excellent specificity for detection of luteinizing hormone. No significant cross-reactivity or interference between luteinizing hormone and analogues was observed.
Assay Type	Competitive Inhibition
Samples	Serum, Plasma and other biological fluids
Detection Range	123.5-10,000pg/mL
Sensitivity	58.5pg/mL
Intra-assay Precision	Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level luteinizing hormone were tested 20 times on one plate, respectively. Intra-Assay: CV<10%
Inter-assay Precision	Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level luteinizing hormone were tested on 3 different plates, 8 replicates in each plate. CV(%) = SD/meanX100. Inter-Assay: CV<12%
Preparation and Storage	For unopened kit, all the reagents should be kept according to the label on each vial. The Standard, Detection Reagent A, Detection Reagent B and the 96-well strip plate should be stored at -20 degree C while others should be at 4 degree C.

ADDITIONAL INFORMATION

Related Product Information for LH elisa kit	Intended Uses: The kit is a competitive inhibition enzyme immunoassay technique for the in vitro quantitative measurement of luteinizing hormone in gallus serum, plasma and other biological fluids. Principle of the Assay: This assay employs the competitive inhibition enzyme immunoassay technique. A monoclonal antibody specific to luteinizing hormone has been pre-coated onto a microplate. A competitive inhibition reaction is launched between biotin labeled luteinizing hormone and unlabeled luteinizing hormone (Standards or samples) with the pre-coated antibody specific to luteinizing hormone. After incubation the unbound conjugate is washed off. Next, avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. The amount of bound HRP conjugate is reverse proportional to the concentration of luteinizing hormone in the sample. After addition of the substrate solution, the intensity of color developed is reverse proportional to the concentration of luteinizing hormone in the sample.
--	---

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
