

Human Podocan (PODN) ELISA Kit | PODN elisa kit

Human Podocan (PODN) ELISA Kit

CATALOG #
AAA149163

REACTIVITY
Human

PRODUCT SYNONYMS

Podocan (PODN); Human Podocan (PODN) ELISA Kit; PCAN; SLRR5A; PODN elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Human
Specificity	This assay has high sensitivity and excellent specificity for detection of PNPT1. No significant cross-reactivity or interference between PNPT1 and analogues was observed.
Sequence Length	611
Assay Type	Double-antibody Sandwich
Samples	Tissue homogenates, Cell lysates, Cell culture supernates and other biological fluids
Detection Range	0.312-20ng/mL
Sensitivity	0.117ng/mL
Intra-assay Precision	Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level PNPT1 were tested 20 times on one plate, respectively. Intra-Assay: CV<10%
Inter-assay Precision	Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level PNPT1 were tested on 3 different plates, 8 replicates in each plate. CV(%) = SD/meanX100. Inter-Assay: CV<12%
Preparation and Storage	The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than 5% within the expiration date under appropriate storage condition. To minimize extra influence on the performance, operation procedures and lab conditions, especially room temperature, air humidity, incubator temperature should be strictly controlled. It is also strongly suggested that the whole assay is performed by the same operator from the beginning to the end.

ADDITIONAL INFORMATION

Related Product Information for PODN elisa kit	Intended Uses: The kit is a sandwich enzyme immunoassay for in vitro quantitative measurement of PNPT1 in human tissue homogenates, cell lysates and other biological fluids. Principle of the Assay: The microplate provided in this kit has been pre-coated with an antibody specific to PNPT1. Standards or samples are then added to the appropriate microplate wells with a biotin-conjugated antibody specific to PNPT1. Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added, only those wells that contain PNPT1, biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450nm +/- 10nm. The concentration of PNPT1 in the samples is then determined by comparing the O.D. of the samples to the standard curve.

NCBI AND UNIPROT INFORMATION

NCBI GI #	552953828
NCBI GeneID	242608
NCBI Accession #	NP_001272885.1
NCBI GenBank Nucleotide #	NM_001285956.1
UniProt Accession #	Q7TQ62; Q8BM45; A2A8F3
Molecular Weight	45,196 Da
NCBI Official Full Name	podocan
NCBI Official Synonym Full Names	podocan
NCBI Official Symbol	Podn
NCBI Official Synonym Symbols	Pcan; SLRR5A; 9430070G18
NCBI Protein Information	podocan
UniProt Protein Name	Podocan
UniProt Gene Name	Podn

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
