

General Cotinine (Cot) ELISA Kit | Cot elisa kit

General Cotinine (Cot) ELISA Kit

CATALOG #
AAA149215

REACTIVITY
General

PRODUCT SYNONYMS

Cotinine (Cot); General Cotinine (Cot) ELISA Kit; Cot elisa kit

PRODUCT SPECIFICATIONS

Reactivity	General
Specificity	This assay has high sensitivity and excellent specificity for detection of cortisol.
Sequence Length	216
Assay Type	Competitive Inhibition
Samples	Serum, Plasma, Tissue homogenates, Cell lysates, Cell culture supernates and other biological fluids
Detection Range	617.3-50,000pg/mL
Sensitivity	233.7pg/mL
Intra-assay Precision	Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level cortisol were tested 20 times on one plate, respectively. Intra-Assay: CV<10%
Inter-assay Precision	Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level cortisol were tested on 3 different plates, 8 replicates in each plate. CV(%) = SD/meanX100. Inter-Assay: CV<12%
Preparation and Storage	The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than 5% within the expiration date under appropriate storage condition. To minimize extra influence on the performance, operation procedures and lab conditions, especially room temperature, air humidity, incubator temperature should be strictly controlled. It is also strongly suggested that the whole assay is performed by the same operator from the beginning to the end.

ADDITIONAL INFORMATION

Related Product Information for Cot elisa kit	Intended Uses: The kit is a competitive inhibition enzyme immunoassay technique for the in vitro quantitative measurement of cortisol in serum, plasma, urine and other biological fluids. Principle of the Assay: This assay employs the competitive inhibition enzyme immunoassay technique. A monoclonal antibody specific to cortisol has been pre-coated onto a microplate. A competitive inhibition reaction is launched between biotin labeled cortisol and unlabeled cortisol (Standards or samples) with the pre-coated antibody specific to cortisol. After incubation the unbound conjugate is washed off. Next, avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. The amount of bound HRP conjugate is reverse proportional to the concentration of cortisol in the sample. After addition of the substrate solution, the intensity of color developed is reverse proportional to the concentration of cortisol in the sample.
