

Cattle Heat Shock Protein 90 (HSP90) ELISA Kit | HSP90 elisa kit

Cattle Heat Shock Protein 90 (HSP90) ELISA Kit

CATALOG #
AAA149912

REACTIVITY
Cattle

PRODUCT SYNONYMS

Heat Shock Protein 90 (HSP90); Cattle Heat Shock Protein 90 (HSP90) ELISA Kit; HtpG; Hsp-90 NTD; N-Terminal Domain; HSP90 elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Cattle
Specificity	This assay has high sensitivity and excellent specificity for detection of Heat Shock Protein 90 (HSP90). No significant cross-reactivity or interference between Heat Shock Protein 90 (HSP90) and analogues was observed.
Sequence Length	704
Assay Type	Double-antibody Sandwich
Sample	Serum, Plasma, Tissue Homogenates, Cell Lysates, Cell Culture Supernates and Other Biological Fluids
Detection Range	3.12-200ng/mL
Sensitivity	The minimum detectable dose of this kit is typically less than 1.13ng/mL
Precision	Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level Heat Shock Protein 90 (HSP90) were tested 20 times on one plate, respectively. Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level Heat Shock Protein 90 (HSP90) were tested on 3 different plates, 8 replicates in each plate. $CV(\%) = SD/mean \times 100$ Intra-Assay: $CV < 10\%$ Inter-Assay: $CV < 12\%$
Preparation and Storage	The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than 5% within the expiration date under appropriate storage condition. To minimize extra influence on the performance, operation procedures and lab conditions, especially room temperature, air humidity, incubator temperature should be strictly controlled. It is also strongly suggested that the whole assay is performed by the same operator from the beginning to the end.

ADDITIONAL INFORMATION

Related Product Information for HSP90 elisa kit	The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate provided in this kit has been pre-coated with an antibody specific to Heat Shock Protein 90 (HSP90). Standards or samples are then added to the appropriate microtiter plate wells with a biotin-conjugated antibody specific to Heat Shock Protein 90 (HSP90). Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added, only those wells that contain Heat Shock Protein 90 (HSP90), biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450nm +/- 10nm. The concentration of Heat Shock Protein 90 (HSP90) in the samples is then determined by comparing the O.D. of the samples to the standard curve.
Product Categories/Family for HSP90 elisa kit	Signal Transduction; Infection Immunity; Hematology; Developmental Science

NCBI AND UNIPROT INFORMATION

NCBI GI #	1010221430
NCBI GeneID	101260143
NCBI GenBank Nucleotide #	NP_001308492.1
NCBI Official Full Name	heat shock protein 90
NCBI Official Symbol	HSP90
NCBI Protein Information	heat shock protein 90

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
