PRODUCT SPECIFICATIONS

Reactivity	Human
Specificity	This assay has high sensitivity and excellent specificity for detection of Alpha 2-Antiplasmin (a2PI). No significant cross-reactivity or interference between Alpha 2-Antiplasmin (a2PI) and analogues was observed.
Sequence Length	491
Assay Type	Double-antibody Sandwich
Samples	Plasma
Detection Range	1.56-100ng/mL
Sensitivity	0.71ng/mL
Precision	Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level Alpha 2-Antiplasmin (a2PI) were tested 20 times on one plate, respectively. Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level Alpha 2-Antiplasmin (a2PI) were tested on 3 different plates, 8 replicates in each plate. $CV(\%) = SD/mean \times 100$ Intra-Assay: $CV < 10\%$ Inter-Assay: $CV < 12\%$
Preparation and Storage	The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than 5% within the expiration date under appropriate storage condition. To minimize extra influence on the performance, operation procedures and lab conditions, especially room temperature, air humidity, incubator temperature should be strictly controlled. It is also strongly suggested that the whole assay is performed by the same operator from the beginning to the end.

ADDITIONAL INFORMATION

Related Product Information for a2PI clia kit	The microplate provided in this kit has been pre-coated with an antibody specific to Alpha 2-Antiplasmin (a2PI). Standards or samples are then added to the appropriate microplate wells with a biotin-conjugated antibody specific to Alpha 2-Antiplasmin (a2PI). Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. Then the mixture of substrate A and B is added to generate glow light emission kinetics. Upon plate development, the intensity of the emitted light is proportional to the Alpha 2-Antiplasmin (a2PI) level in the sample or standard.
