

Pig Luteinizing Hormone Beta Polypeptide (LHb) ELISA Kit | LHb elisa kit

Pig Luteinizing Hormone Beta Polypeptide (LHb)(Competitive ELISA) ELISA Kit

CATALOG #
AAA152511

REACTIVITY
Pig

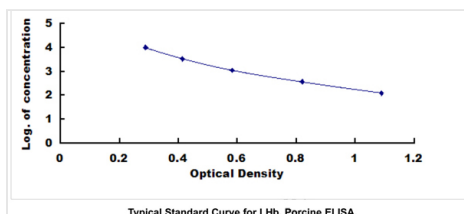

PRODUCT SYNONYMS

Luteinizing Hormone Beta Polypeptide (LHb); Pig Luteinizing Hormone Beta Polypeptide (LHb)(Competitive ELISA) ELISA Kit; ELISA Kit for Luteinizing Hormone Beta Polypeptide (LHb); LH-B; CGB4; LSH-B; hLHB; Lutropin Subunit Beta; Interstitial Cell Stimulating Hormone; Beta Chain; LHb elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Pig
Specificity	This assay has high sensitivity and excellent specificity for detection of LHb. No significant cross-reactivity or interference between LHb and analogues was observed.
Assay Type	Quantitative Competitive
Samples	Porcine serum, plasma, tissue homogenates, cell lysates, cell culture supernates and other biological fluids
Detection Range	123.5-10,000pg/mL
Sensitivity	< 45.7pg/mL
Intra-assay Precision	Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level LHb were tested 20 times on one plate, respectively. Intra-Assay: CV<10%
Inter-assay Precision	Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level LHb were tested on 3 different plates, 8 replicates in each plate. CV(%) = SD/meanX100. Inter-Assay: CV<12%
Preparation and Storage	Store at 4 degree C for 1 month/-20 degree C for long-term (within shelf life) Shelf-life: one year The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than 5% within the expiration date under appropriate storage condition. To minimize extra influence on the performance, operation procedures and lab conditions, especially room temperature, air humidity, incubator temperature should be strictly controlled. It is also strongly suggested that the whole assay is performed by the same operator from the beginning to the end.

ADDITIONAL INFORMATION

Related Product Information for LHb elisa kit	Principle of the Assay: This assay employs the competitive inhibition enzyme immunoassay technique. A monoclonal antibody specific to LHb has been pre-coated onto a microplate. A competitive inhibition reaction is launched between biotin labeled LHb and unlabeled LHb (Standards or samples) with the pre-coated antibody specific to LHb. After incubation the unbound conjugate is washed off. Next, avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. The amount of bound HRP conjugate is reverse proportional to the concentration of LHb in the sample. After addition of the substrate solution, the intensity of color developed is reverse proportional to the concentration of LHb in the sample. Intended Uses: The kit is a competitive inhibition enzyme immunoassay technique for the in vitro quantitative measurement of LHb in porcine serum, plasma, tissue homogenates, cell lysates, cell culture supernates and other biological fluids.

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
