

Human Anti Single Stranded DNA ELISA Kit | ssDNA elisa kit

Human Anti Single Stranded DNA ELISA Kit

CATALOG #
AAA16020

REACTIVITY
Human

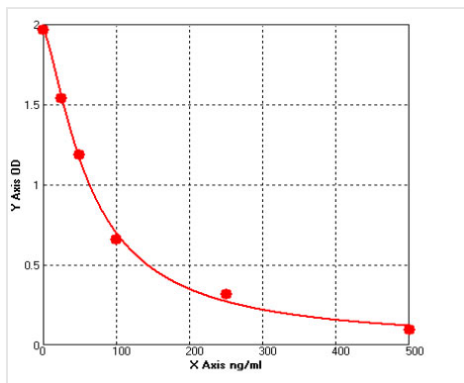

PRODUCT SYNONYMS

Anti Single Stranded DNA; Human Anti Single Stranded DNA ELISA Kit; ssDNA elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Human
Specificity	This assay has high sensitivity and excellent specificity for detection of Anti-ssDNA. No significant cross-reactivity or interference between Anti-ssDNA and analogues was observed. NOTE: Limited by current skills and knowledge, it is impossible for us to complete the cross-reactivity detection between Anti-ssDNA and all the analogues, therefore, cross reaction may still exist in some cases.
Assay Type	Quantitative Competitive
Samples	Serum, plasma, cell culture supernatants, body fluid and tissue homogenate
Sensitivity	1.0 ng/mL
Preparation and Storage	Store all reagents at 2-8 degree C.

ADDITIONAL INFORMATION

Related Product Information for ssDNA elisa kit	Principle of the Assay: Anti-ssDNA ELISA kit applies the competitive enzyme immunoassay technique utilizing single stranded DNA antigen and an Anti-ssDNA-HRP conjugate. The assay sample and buffer are incubated together with Anti-ssDNA-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the Anti-ssDNA concentration since Anti-ssDNA from samples and Anti-ssDNA-HRP conjugate compete for the single stranded DNA antigen binding site. Since the number of sites is limited, as more sites are occupied by Anti-ssDNA from the sample, fewer sites are left to bind Anti-ssDNA-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The Anti-ssDNA concentration in each sample is interpolated from this standard curve. Intended Uses: This Anti-ssDNA ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Human Anti-ssDNA. This ELISA kit for research use only, not for therapeutic or diagnostic applications!
Product Categories/Family for ssDNA elisa kit	Immunology

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
