

General Corticosterone (Cort) ELISA Kit

Corticosterone (Cort) High Sensitive ELISA Kit

CATALOG #
AAA161441

REACTIVITY
General

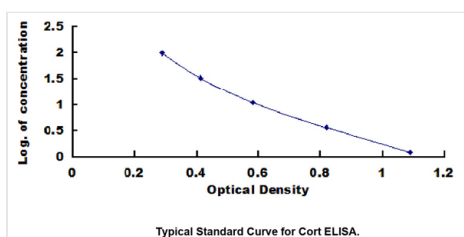

PRODUCT SYNONYMS

Corticosterone (Cort); Corticosterone (Cort) High Sensitive ELISA Kit; Corticosterone (Cort) elisa kit

PRODUCT SPECIFICATIONS

Reactivity	General
Specificity	This assay has high sensitivity and excellent specificity for detection of Cort. No significant cross-reactivity or interference between Cort and analogues was observed.
Assay Type	Quantitative Competitive
Samples	Serum, plasma, tissue homogenates, cell lysates, cell culture supernates and other biological fluids
Detection Range	1.23-100ng/mL
Sensitivity	< 0.44ng/mL
Intra-assay Precision	Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level Cort were tested 20 times on one plate, respectively. Intra-Assay: CV<10%
Inter-assay Precision	Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level Cort were tested on 3 different plates, 8 replicates in each plate. CV(%) = SD/meanX100. Inter-Assay: CV<12%
Preparation and Storage	For unopened kit: The whole kit could be stored at -20oC in shelf life, while up to one month at 4oC. For experiment convenience, reagents could also be stored seperately, Standard, Detection Reagent A, Detection Reagent B and 96-well strip plate should be stored at -20oC while the others could be at 4 oC.

ADDITIONAL INFORMATION

Related Product Information for Corticosterone (Cort) elisa kit	Principle of the Assay: This assay employs the competitive inhibition enzyme immunoassay technique. A monoclonal antibody specific to Cort has been pre-coated onto a microplate. A competitive inhibition reaction is launched between biotin labeled Cort and unlabeled Cort (Standards or samples) with the pre-coated antibody specific to Cort. After incubation the unbound conjugate is washed off. Next, avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. The amount of bound HRP conjugate is reverse proportional to the concentration of Cort in the sample. After addition of the substrate solution, the intensity of color developed is reverse proportional to the concentration of Cort in the sample. Intended Uses: The kit is a competitive inhibition enzyme immunoassay technique for the in vitro quantitative measurement of Cort in serum, plasma, tissue homogenates, cell lysates, cell culture supernates and other biological fluids.
