Precision	Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level Anti-Cytochrome P450 2E1 Antibody (Anti-CYP2E1) were tested 20 times on one plate, respectively. Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level Anti-Cytochrome P450 2E1 Antibody (Anti-CYP2E1) were tested on 3 different plates, 8 replicates in each plate. CV(%) = SD/meanX100 Intra-Assay: CV<10%, Inter-Assay: CV<12%
Assay Procedure Summary	1. Prepare all reagents, samples and standards 2. Add 100ul standard or sample to each well. Incubate 2 hours at 37 degree C 3. Aspirate and add 100ul prepared Detection Reagent A. Incubate 1 hour at 37 degree C 4. Aspirate and wash 5 times 5. Add 90ul Substrate Solution. Incubate 10-20 minutes at 37 degree C 6. Add 50ul Stop Solution. Read at 450nm immediately.

Test Principle	The microtiter plate provided in this kit has been pre-coated with an antigen. Standards or samples are then added to the appropriate microtiter plate wells with a Horseradish Peroxidase (HRP)-conjugated secondary antibody. After TMB substrate solution is added, those wells that contain Anti-Cytochrome P450 2E1 Antibody (Anti-CYP2E1) will exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450nm +/- 10nm. The concentration of Anti-Cytochrome P450 2E1 Antibody (Anti-CYP2E1) in the samples is then determined by comparing the O.D. of the samples to the standard curve.
Research Area	Signal transduction, Metabolic pathway
Preparation and Storage	Store at 4 degree C for 1 month/-20 degree C for long-term (One year within shelf life) The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than 5% within the expiration date under appropriate storage condition.To minimize extra influence on the performance, operation procedures and lab conditions, especially room temperature, air humidity, incubator temperature should be strictly controlled. It is also strongly suggested that the whole assay is performed by the same operator from the beginning to the end.
