

Rabbit Chondroitin sulfate ELISA Kit | CS elisa kit

Rabbit Chondroitin sulfate ELISA Kit

CATALOG #
AAA16216

REACTIVITY
Rabbit

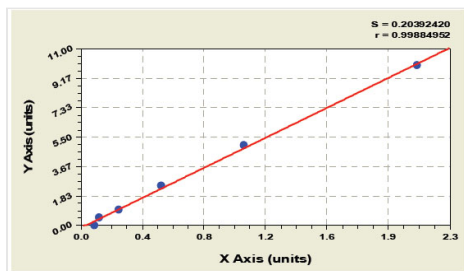

PRODUCT SYNONYMS

Chondroitin sulfate; Rabbit Chondroitin sulfate ELISA Kit; CS elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Rabbit
Samples	Serum, plasma, Cell Culture Supernatants, body fluid and tissue homogenate
Assay Type	Sandwich
Detection Range	1.0-25ng/mL
Sensitivity	0.1ng/mL
Intended Uses	This CS ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Rabbit CS. This ELISA kit for research use only, not for therapeutic applications!
Preparation and Storage	Store all reagents at 2-8 degree C.

ADDITIONAL INFORMATION

Related Product Information for CS elisa kit

Principle of the assay: CS ELISA kit applies the quantitative sandwich enzyme immunoassay technique. The microtiter plate has been pre-coated with a monoclonal antibody specific for CS. Standards or samples are then added to the microtiter plate wells and CS if present, will bind to the antibody pre-coated wells. In order to quantitatively determine the amount of CS present in the sample, a standardized preparation of horseradish peroxidase (HRP)-conjugated polyclonal antibody, specific for CS are added to each well to "sandwich" the CS immobilized on the plate. The microtiter plate undergoes incubation, and then the wells are thoroughly washed to remove all unbound components. Next, substrate solutions are added to each well. The enzyme (HRP) and substrate are allowed to react over a short incubation period. Only those wells that contain CS and enzyme-conjugated antibody will exhibit a change in color. The enzyme-substrate reaction is terminated by addition of a sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450 nm. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The CS concentration in each sample is interpolated from this standard curve.
