ADDITIONAL INFORMATION

Related Product Information for anti-CSPG4 antibody	NG2 antibody is an unconjugated rabbit polyclonal antibody to human NG2 (CSPG4). Validated for IHC and WB. CSPG4 (Chondroitin sulfate proteoglycan 4, MCSP, NG2) is a transmembrane proteoglycan that functions in angiogenesis, cell survival and migration, and the modulation of neuronal networks and pericyte functions. CSPG4 is an important prognostic marker in cancer, as it is upregulated in glioblastoma and is expressed on the cell surface of malignant melanoma cells, where it is involved in progression and spreading. In normal tissue, CSPG4 is highly expressed on NG2-glia cells in the brain, and is also found on osteoblasts, melanocytes, smooth muscle cells, mesenchymal stem cells, and pericytes. It is also a useful marker for oligodendrocyte precursor cells in developing and adult humans. Mutations in CSPG4 can result in a disruption in white matter integrity and oligodendrocyte morphology in the brain and are correlated with familial schizophrenia. In immunohistochemistry, CSPG4 has membranous and cytoplasmic positivity in all tissues throughout the body.
