

Guinea Pig Interleukin 1beta ELISA Kit | IL-1beta elisa kit

Guinea pig Interleukin 1beta ELISA Kit

CATALOG #
AAA16303

REACTIVITY
Guinea Pig

PRODUCT SYNONYMS

Interleukin 1beta; Guinea pig Interleukin 1beta ELISA Kit; Guinea pig Interleukin 1b ELISA Kit; IL-1beta elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Guinea Pig
Specificity	This assay has high sensitivity and excellent specificity for detection of IL-1beta. No significant cross-reactivity or interference between IL-1beta and analogues was observed. NOTE: Limited by current skills and knowledge, it is impossible for us to complete the cross-reactivity detection between IL-1beta and all the analogues, therefore, cross reaction may still exist in some cases.
Samples	Serum, plasma, cell culture supernatants, body fluid and tissue homogenate
Assay Type	Quantitative Competitive or Sandwich
Sensitivity	1.0pg/mL
Preparation and Storage	Store all reagents at 2-8 degree C.

ADDITIONAL INFORMATION

Related Product Information for IL-1beta elisa kit	Intended Uses: This IL-1beta ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Guinea pig IL-1beta. This ELISA kit for research use only, not for therapeutic or test applications! Principle of the Assay: IL-1beta ELISA kit applies the quantitative sandwich enzyme immunoassay technique. The microtiter plate has been pre-coated with a monoclonal antibody specific for IL-1beta. Standards or samples are then added to the microtiter plate wells and IL-1beta if present, will bind to the antibody pre-coated wells. In order to quantitatively determine the amount of IL-1beta present in the sample, a standardized preparation of horseradish peroxidase (HRP)-conjugated polyclonal antibody, specific for IL-1beta are added to each well to "sandwich" the IL-1beta immobilized on the plate. The microtiter plate undergoes incubation, and then the wells are thoroughly washed to remove all unbound components. Next, substrate solutions are added to each well. The enzyme (HRP) and substrate are allowed to react over a short incubation period. Only those wells that contain IL-1beta and enzyme-conjugated antibody will exhibit a change in color. The enzyme-substrate reaction is terminated by addition of a sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450 nm. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The IL-1beta concentration in each sample is interpolated from this standard curve.
