

Human HELIX-II ELISA Kit | HELIX-II elisa kit

Human HELIX-II(Type II Collagen Helical Peptide) ELISA Kit

CATALOG #
AAA163633

REACTIVITY
Human

PRODUCT SYNONYMS

HELIX-II; Human HELIX-II(Type II Collagen Helical Peptide) ELISA Kit; HELIX-II elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Human
Specificity	This kit recognizes Human HELIX- II in samples. No significant cross-reactivity or interference between Human HELIX- II and analogues was observed.
Samples	Serum, plasma and other biological fluids
Assay Type	Quantitative Sandwich
Detection Range	0.78-50ng/mL
Sensitivity	0.47ng/mL
Intra-assay Precision	Intra-assay Precision (Precision within an assay): 3 samples with low, mid range and high level Human HELIX- II were tested 20 times on one plate, respectively.
Inter-assay Precision	Inter-assay Precision (Precision between assays): 3 samples with low, mid range and high level Human HELIX- II were tested on 3 different plates, 20 replicates in each plate.
Preparation and Storage	Store at 4 degree C.

ADDITIONAL INFORMATION

Related Product Information for HELIX-II elisa kit	Intended Uses: This ELISA kit applies to the in vitro quantitative determination of Human HELIX- II concentrations in serum, plasma and other biological fluids. Principle of the Assay: This ELISA kit uses the Sandwich-ELISA principle. The micro ELISA plate provided in this kit has been pre-coated with an antibody specific to Human HELIX- II. Standards or samples are added to the micro ELISA plate wells and combined with the specific antibody. Then a biotinylated detection antibody specific for Human HELIX- II and Avidin-Horseradish Peroxidase (HRP) conjugate are added successively to each micro plate well and incubated. Free components are washed away. The substrate solution is added to each well. Only those wells that contain Human HELIX- II, biotinylated detection antibody and Avidin-HRP conjugate will appear blue in color. The enzyme-substrate reaction is terminated by the addition of stop solution and the color turns yellow. The optical density (OD) is measured spectrophotometrically at a wavelength of 450 nm +/- 2 nm. The OD value is proportional to the concentration of Human HELIX- II. You can calculate the concentration of Human HELIX- II in the samples by comparing the OD of the samples to the standard curve.
