ADDITIONAL INFORMATION

Related Product Information for AP36 elisa kit	Principle of the Assay: This ELISA kit uses the Competitive-ELISA principle. The micro ELISA plate provided in this kit has been pre-coated with Human AP36. During the reaction, Human AP36 in the sample or standard competes with a fixed amount of Human AP36 on the solid phase supporter for sites on the Biotinylated Detection Ab specific to Human AP36. Excess conjugate and unbound sample or standard are washed from the plate, and Avidin conjugated to Horseradish Peroxidase (HRP) are added to each microplate well and incubated. Then a TMB substrate solution is added to each well. The enzyme-substrate reaction is terminated by the addition of stop solution and the color change is measured spectrophotometrically at a wavelength of 450 nm ± 2 nm. The concentration of Human AP36 in the samples is then determined by comparing the OD of the samples to the standard curve. Intended Uses: This ELISA kit applies to the in vitro quantitative determination of Human AP36 concentrations in serum, plasma and other biological fluids.
