ADDITIONAL INFORMATION

Related Product Information for BAFF/CD257/TNFSF13B elisa kit	Intended Uses: This ELISA kit applies to the in vitro quantitative determination of Rabbit BAFF/CD257/TNFSF13B concentrations in serum, plasma and other biological fluids. Principle of the Assay: This ELISA kit uses Sandwich-ELISA as the method. The micro ELISA plate provided in this kit has been pre-coated with an antibody specific to BAFF/CD257/TNFSF13B. Standards or samples are added to the appropriate micro ELISA plate wells and combined with the specific antibody. Then a biotinylated detection antibody specific for BAFF/CD257/TNFSF13B and Avidin-Horseradish Peroxidase (HRP) conjugate is added to each micro plate well successively and incubated. Free components are washed away. The substrate solution is added to each well. Only those wells that contain BAFF/CD257/TNFSF13B, biotinylated detection antibody and Avidin-HRP conjugate will appear blue in color. The enzyme-substrate reaction is terminated by the addition of a sulphuric acid solution and the color turns yellow. The optical density (OD) is measured spectrophotometrically at a wavelength of 450 nm +/- 2 nm. The OD value is proportional to the concentration of BAFF/CD257/TNFSF13B. You can calculate the concentration of BAFF/CD257/TNFSF13B in the samples by comparing the OD of the samples to the standard curve.
