ADDITIONAL INFORMATION

Related Product Information for IL-2sRalpha/CD25 elisa kit	Description: The kit is a sandwich enzyme immunoassay for in vitro quantitative measurement of IL-2sRalpha/CD25 in Rat serum, plasma and other biological fluids Principle of the Assay: This ELISA kit uses Sandwich-ELISA as the method. The micro ELISA plate provided in this kit has been pre-coated with an antibody specific to Rat IL-2sRalpha/CD25. Standards or samples are added to the appropriate micro ELISA plate wells and bound by the specific antibody. Then a biotinylated detection antibody specific for Rat IL-2sRalpha/CD25 and Avidin-Horseradish Peroxidase (HRP) conjugate is added to each micro plate well successively and incubated. Free components are washed away. The substrate solution is added to each well. Only those wells that contain Rat IL-2sRalpha/CD25, biotinylated detection antibody and Avidin-HRP conjugate will appear blue in color. The enzyme-substrate reaction is terminated by the addition of a sulphuric acid solution and the color turns yellow. The optical density (OD) is measured spectrophotometrically at a wavelength of 450 nm +/- 2 nm. The OD value is proportional to the concentration of Rat IL-2sRalpha/CD25. You can calculate the concentration of Rat IL-2sRalpha/CD25 in the samples by comparing the OD of the samples to the standard curve.
