

Human SM/SPH ELISA Kit | SM/SPH elisa kit

Human SM/SPH (Sphingomyelin) ELISA Kit

CATALOG #
AAA165041

REACTIVITY
Human

PRODUCT SYNONYMS

SM/SPH; Human SM/SPH (Sphingomyelin) ELISA Kit; SM/SPH elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Human
Specificity	This assay has high sensitivity and excellent specificity for detection of Human SM/SPH. No significant cross-reactivity or interference between Human SM/SPH and analogues was observed. Note: Limited by current skills and knowledge, it is impossible for us to complete the cross- reactivity detection between Human SM/SPH and all the analogues, therefore, cross reaction may still exist.
Samples	Serum, Plasma, Biological Fluids
Assay Type	Sandwich
Detection Range	3.125-200ng/mL
Sensitivity	Min: 1.875ng/mL; Max: 200ng/mL
Preparation and Storage	Store at 4 degree C.

ADDITIONAL INFORMATION

Related Product Information for SM/SPH elisa kit	Description: The kit is a sandwich enzyme immunoassay for in vitro quantitative measurement of SM/SPH in human serum, plasma and other biological fluids Principle of the Assay: This ELISA kit uses Sandwich-ELISA as the method. The micro ELISA plate provided in this kit has been pre-coated with an antibody specific to Human SM/SPH. Standards or samples are added to the appropriate micro ELISA plate wells and bound by the specific antibody. Then a biotinylated detection antibody specific for Human SM/SPH and Avidin-Horseradish Peroxidase (HRP) conjugate is added to each micro plate well successively and incubated. Free components are washed away. The substrate solution is added to each well. Only those wells that contain Human SM/SPH, biotinylated detection antibody and Avidin-HRP conjugate will appear blue in color. The enzyme-substrate reaction is terminated by the addition of a sulphuric acid solution and the color turns yellow. The optical density (OD) is measured spectrophotometrically at a wavelength of 450 nm +/- 2 nm. The OD value is proportional to the concentration of Human SM/SPH. You can calculate the concentration of Human SM/SPH in the samples by comparing the OD of the samples to the standard curve.
