ADDITIONAL INFORMATION

Related Product Information for C1INH elisa kit	Intended Uses: This ELISA kit applies to the in vitro quantitative determination of Rat BH4 concentrations in serum, plasma and other biological fluids. Principle of the Assay: This ELISA kit uses the Competitive-ELISA principle. The micro ELISA plate provided in this kit has been pre-coated with Rat BH4. During the reaction, Rat BH4 in the sample or standard competes with a fixed amount of Rat BH4 on the solid phase supporter for sites on the Biotinylated Detection Ab specific to Rat BH4. Excess conjugate and unbound sample or standard are washed from the plate, and Avidin conjugated to Horseradish Peroxidase (HRP) are added to each microplate well and incubated. Then a TMB substrate solution is added to each well. The enzyme-substrate reaction is terminated by the addition of stop solution and the color change is measured spectrophotometrically at a wavelength of 450 nm +/- 2 nm. The concentration of Rat BH4 in the samples is then determined by comparing the OD of the samples to the standard curve.
