

Human Phosphatidylserine ELISA Kit | PS elisa kit

Human Phosphatidylserine ELISA Kit

CATALOG #
AAA16588

REACTIVITY
Human

PRODUCT SYNONYMS

Phosphatidylserine; Human Phosphatidylserine ELISA Kit; PS elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Human
Specificity	This assay has high sensitivity and excellent specificity for detection of PS. No significant cross-reactivity or interference between PS and analogues was observed. NOTE: Limited by current skills and knowledge, it is impossible for us to complete the cross-reactivity detection between PS and all the analogues, therefore, cross reaction may still exist in some cases.
Assay Type	Quantitative Competitive
Samples	Serum, plasma, cell culture supernatants, body fluid and tissue homogenate
Sensitivity	1.0 ng/mL
Preparation and Storage	Store all reagents at 2-8 degree C.

ADDITIONAL INFORMATION

Related Product Information for PS elisa kit	Principle of the Assay: PS ELISA kit applies the competitive enzyme immunoassay technique utilizing a polyclonal anti-PS antibody and an PS-HRP conjugate. The assay sample and buffer are incubated together with PS-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the PS concentration since PS from samples and PS-HRP conjugate compete for the anti-PS antibody binding site. Since the number of sites is limited, as more sites are occupied by PS from the sample, fewer sites are left to bind PS-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The PS concentration in each sample is interpolated from this standard curve. Intended Uses: This PS ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Human PS. This ELISA kit for research use only, not for therapeutic or diagnostic applications!

NCBI AND UNIPROT INFORMATION

NCBI GI #	339443038
NCBI GeneID	10925972
NCBI Accession #	YP_004709043.1
NCBI GenBank Nucleotide #	NC_015737.1
Molecular Weight	59,230 Da
NCBI Official Full Name	phosphatidylserine
NCBI Official Symbol	Cls
NCBI Protein Information	phosphatidylserine
UniProt Protein Name	Phosphatidylserine
UniProt Gene Name	Cls
UniProt Synonym Gene Names	CXIVA_19740
UniProt Entry Name	F7V5B2_CLOSS

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
