

Human pNF-H ELISA Kit | pNF-H elisa kit

Human pNF-H (Phosphorylated Neurofilament H) ELISA Kit

CATALOG #
AAA166004

REACTIVITY
Human

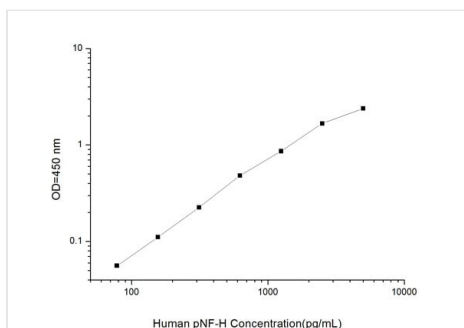

PRODUCT SYNONYMS

pNF-H; Human pNF-H (Phosphorylated Neurofilament H) ELISA Kit; pNF-H elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Human
Specificity	This kit recognizes Human pNF-H in samples. No significant cross-reactivity or interference between Human pNF-H and analogues was observed.
Samples	Serum, plasma and other biological fluids
Assay Type	Quantitative Sandwich
Detection Range	78.13-5000pg/mL
Sensitivity	46.88pg/mL
Intra-assay Precision	Intra-assay Precision (Precision within an assay): 3 samples with low, mid range and high level Human pNF-H were tested 20 times on one plate, respectively.
Inter-assay Precision	Inter-assay Precision (Precision between assays): 3 samples with low, mid range and high level Human pNF-H were tested on 3 different plates, 20 replicates in each plate.
Preparation and Storage	Store at 4 degree C.

ADDITIONAL INFORMATION

Related Product Information for pNF-H elisa kit	Intended Uses: This ELISA kit applies to the in vitro quantitative determination of Human pNF-H concentrations in serum, plasma and other biological fluids. Principle of the Assay: This ELISA kit uses the Sandwich-ELISA principle. The micro ELISA plate provided in this kit has been pre-coated with an antibody specific to Human pNF-H. Standards or samples are added to the micro ELISA plate wells and combined with the specific antibody. Then a biotinylated detection antibody specific for Human pNF-H and Avidin-Horseradish Peroxidase (HRP) conjugate are added successively to each micro plate well and incubated. Free components are washed away. The substrate solution is added to each well. Only those wells that contain Human pNF-H, biotinylated detection antibody and Avidin-HRP conjugate will appear blue in color. The enzyme-substrate reaction is terminated by the addition of stop solution and the color turns yellow. The optical density (OD) is measured spectrophotometrically at a wavelength of 450 nm +/- 2 nm. The OD value is proportional to the concentration of Human pNF-H. You can calculate the concentration of Human pNF-H in the samples by comparing the OD of the samples to the standard curve.
