ADDITIONAL INFORMATION

Related Product Information for anti-DDX58 antibody

Background: DEAD box proteins, characterized by the conserved motif Asp-Glu- Ala-Asp (DEAD), are putative RNA helicases which are implicated in a number of cellular processes involving RNA binding and alteration of RNA secondary structure. This gene encodes a protein containing RNA helicase-DEAD box protein motifs and a caspase recruitment domain (CARD). It is involved in viral double-stranded (ds) RNA recognition and the regulation of immune response.
