ADDITIONAL INFORMATION

Related Product Information for anti-CIDEB antibody

This protein can activate apoptosis. It is inhibited by DFFB and interacts with DFFA and DFFB. It has high levels of expression in liver and small intestine, and has lower levels of expression in colon, kidney and spleen. CideB specifically interacts with VLDL structural protein, apolipoprotein B100 (apoB100), but not with albumin, a PTG cargo protein. It can interact with COPII components, Sar1 and Sec24.
