

Mouse Soluble Amyloid Precursor Protein beta ELISA Kit | sAPPbeta elisa kit

Mouse Soluble Amyloid Precursor Protein beta ELISA Kit

CATALOG #
AAA16726

REACTIVITY
Mouse

PRODUCT SYNONYMS

Soluble Amyloid Precursor Protein beta; Mouse Soluble Amyloid Precursor Protein beta ELISA Kit; Mouse Soluble Amyloid Precursor Protein b ELISA Kit; sAPPbeta elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Mouse
Specificity	This assay has high sensitivity and excellent specificity for detection of SAPPbeta. No significant cross-reactivity or interference between SAPPbeta and analogues was observed. NOTE: Limited by current skills and knowledge, it is impossible for us to complete the cross-reactivity detection between SAPPbeta and all the analogues, therefore, cross reaction may still exist in some cases.
Assay Type	Quantitative Competitive or Sandwich
Samples	Serum, plasma, cell culture supernatants, body fluid and tissue homogenate
Sensitivity	1.0 pg/mL
Preparation and Storage	Store all reagents at 2-8 degree C.

ADDITIONAL INFORMATION

Related Product Information for sAPPbeta elisa kit	Principle of the Assay: SAPPbeta ELISA kit applies the competitive enzyme immunoassay technique utilizing a polyclonal anti-SAPPbeta antibody and an SAPPbeta-HRP conjugate. The assay sample and buffer are incubated together with SAPPbeta-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the SAPPbeta concentration since SAPPbeta from samples and SAPPbeta-HRP conjugate compete for the anti-SAPPbeta antibody binding site. Since the number of sites is limited, as more sites are occupied by SAPPbeta from the sample, fewer sites are left to bind SAPPbeta-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The SAPPbeta concentration in each sample is interpolated from this standard curve. Intended Uses: This SAPPbeta ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Mouse SAPPbeta. This ELISA kit for research use only, not for therapeutic or diagnostic applications!
Product Categories/Family for sAPPbeta elisa kit	Neurobiology

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
