ADDITIONAL INFORMATION

Related Product Information for anti-AFF2 antibody

This gene encodes a putative transcriptional activator that is a member of the AF4/FMR2 gene family. This gene is associated with the folate-sensitive fragile X E locus on chromosome X. A repeat polymorphism in the fragile X E locus results in silencing of this gene causing Fragile X E syndrome. Fragile X E syndrome is a form of nonsyndromic X-linked mental retardation. Alternate splicing results in multiple transcript variants.
