

Monkey B-Cell Activation Factor ELISA Kit | BAFF elisa kit

Monkey B-Cell Activation Factor ELISA Kit

CATALOG #
AAA17036

REACTIVITY
Monkey

PRODUCT SYNONYMS

B-Cell Activation Factor; Monkey B-Cell Activation Factor ELISA Kit; BAFF elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Monkey
Specificity	This assay has high sensitivity and excellent specificity for detection of BAFF. No significant cross-reactivity or interference between BAFF and analogues was observed. NOTE: Limited by current skills and knowledge, it is impossible for us to complete the cross-reactivity detection between BAFF and all the analogues, therefore, cross reaction may still exist in some cases.
Assay Type	Quantitative Competitive
Samples	Serum, plasma, cell culture supernatants, body fluid and tissue homogenate
Sensitivity	0.1 ng/ml
Preparation and Storage	Store all reagents at 2-8 degree C.

ADDITIONAL INFORMATION

Related Product Information for BAFF elisa kit	Principle of the Assay: BAFF ELISA kit applies the competitive enzyme immunoassay technique utilizing a polyclonal anti-BAFF antibody and an BAFF-HRP conjugate. The assay sample and buffer are incubated together with BAFF-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the BAFF concentration since BAFF from samples and BAFF-HRP conjugate compete for the anti-BAFF antibody binding site. Since the number of sites is limited, as more sites are occupied by BAFF from the sample, fewer sites are left to bind BAFF-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The BAFF concentration in each sample is interpolated from this standard curve. Intended Uses: This BAFF ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Monkey BAFF. This ELISA kit for research use only, not for therapeutic or diagnostic applications!
