ADDITIONAL INFORMATION

Related Product Information for anti-KLF17 antibody	Krueppel-like factor 17 is a protein that in humans is encoded by the KLF17 gene. Transcription repressor that binds to the promoter of target genes and prevents their expression. Acts as a negative regulator of epithelial-mesenchymal transition and metastasis in breast cancer. Specifically binds the 5'-CACCC-3' sequence in the promoter of ID1, a key metastasis regulator in breast cancer, and repress its expression. May be a germ cell-specific transcription factor that plays important roles in spermatid differentiation and oocyte development.
