

Mouse Endogenous Glucocorticoid ELISA Kit | GC elisa kit

Mouse Endogenous Glucocorticoid ELISA Kit

CATALOG #
AAA17048

REACTIVITY
Mouse

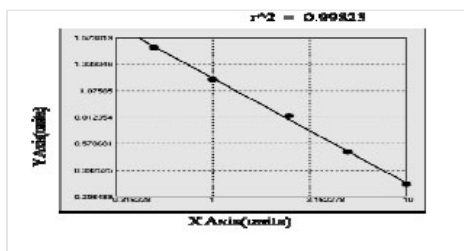

PRODUCT SYNONYMS

Endogenous Glucocorticoid; Mouse Endogenous Glucocorticoid ELISA Kit; GC elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Mouse
Samples	Serum, plasma, Cell Culture Supernatants, body fluid and tissue homogenate
Assay Type	Competitive
Detection Range	2.5-50ng/mL
Sensitivity	0.1ng/mL
Preparation and Storage	Store all reagents at 2-8 degree C.

ADDITIONAL INFORMATION

Related Product Information for GC elisa kit

Intended Uses: This E-GC ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Mouse E-GC.

Principle of the Assay: E-GC ELISA kit applies the competitive enzyme immunoassay technique utilizing a monoclonal anti-E-GC antibody and an E-GC-HRP conjugate. The assay sample and buffer are incubated together with E-GC-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the E-GC concentration since E-GC from samples and E-GC-HRP conjugate compete for the anti-E-GC antibody binding site. Since the number of sites is limited, as more sites are occupied by E-GC from the sample, fewer sites are left to bind E-GC-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The E-GC concentration in each sample is interpolated from this standard curve.
