ADDITIONAL INFORMATION

Related Product Information for anti-CCL6 antibody	In mice, Ccl6 is expressed in cells from neutrophil and macrophage lineages, and can be greatly induced under conditions suitable for myeloid cell differentiation. It is highly expressed in bone marrow cultures that have been stimulated with the cytokine GM-CSF. Some low levels of gene expression also occur in certain cell lines of myeloid origin (e.g. the immature myeloid cell lines DA3 and 32D cl3, and the macrophage cell line P388D) that can also be greatly induced in culture with GM-CSF. However, in activated T cell lines, expression of Ccl6 is greatly reduced. Ccl6 can also be induced in the mouse lung by the cytokine interleukin 13.
