

## Human Resolvin E1 ELISA Kit | RvE1 elisa kit

Human Resolvin E1 ELISA Kit

CATALOG #  
**AAA17081**

REACTIVITY  
**Human**

### PRODUCT SYNONYMS

Resolvin E1; Human Resolvin E1 ELISA Kit; RvE1 elisa kit

### PRODUCT SPECIFICATIONS

|                         |                                                                                                                                                                                                                                                                                                                                                                                          |
|-------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Reactivity              | Human                                                                                                                                                                                                                                                                                                                                                                                    |
| Specificity             | This assay has high sensitivity and excellent specificity for detection of RvE1. No significant cross-reactivity or interference between RvE1 and analogues was observed. NOTE: Limited by current skills and knowledge, it is impossible for us to complete the cross-reactivity detection between RvE1 and all the analogues, therefore, cross reaction may still exist in some cases. |
| Assay Type              | Quantitative Competitive                                                                                                                                                                                                                                                                                                                                                                 |
| Samples                 | Serum, plasma, cell culture supernatants, body fluid and tissue homogenate                                                                                                                                                                                                                                                                                                               |
| Sensitivity             | 1.0 pg/mL                                                                                                                                                                                                                                                                                                                                                                                |
| Preparation and Storage | Store all reagents at 2-8 degree C.                                                                                                                                                                                                                                                                                                                                                      |

| Related Product Information for RvE1 elisa kit | <p>Principle of the Assay: RvE1 ELISA kit applies the competitive enzyme immunoassay technique utilizing a polyclonal anti-RvE1 antibody and an RvE1-HRP conjugate. The assay sample and buffer are incubated together with RvE1-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the RvE1 concentration since RvE1 from samples and RvE1-HRP conjugate compete for the anti-RvE1 antibody binding site. Since the number of sites is limited, as more sites are occupied by RvE1 from the sample, fewer sites are left to bind RvE1-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The RvE1 concentration in each sample is interpolated from this standard curve.</p> <p>Intended Uses: This RvE1 ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Human RvE1. This ELISA kit for research use only, not for therapeutic or diagnostic applications!</p> |

**For Research Use Only.** Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
