

## Human VTN (Vitronectin) CLIA Kit | VTN clia kit

Human VTN (Vitronectin) CLIA Kit

CATALOG #  
**AAA170810**

REACTIVITY  
**Human**

### PRODUCT SYNONYMS

VTN (Vitronectin); Human VTN (Vitronectin) CLIA Kit; V75; VN; VNT; VTN clia kit

### PRODUCT SPECIFICATIONS

|                 |                                                                                                                                          |
|-----------------|------------------------------------------------------------------------------------------------------------------------------------------|
| Reactivity      | Human                                                                                                                                    |
| Specificity     | This kit recognizes natural and recombinant VTN. No significant cross-reactivity or interference between VTN and analogues was observed. |
| Sequence Length | 478                                                                                                                                      |
| Assay Type      | Sandwich                                                                                                                                 |
| Detection Range | 0.938-60ng/mL                                                                                                                            |
| Sensitivity     | Min: 0.563ng/mL; Max: 60ng/mL                                                                                                            |

### ADDITIONAL INFORMATION

#### Related Product Information for VTN clia kit

**Intended Uses:** This CLIA kit applies to the in vitro quantitative determination of VTN concentrations in serum, plasma and other biological fluids.

**Principle of the Assay:** This kit uses Sandwich-CLIA as the method. The micro CLIA plate provided in this kit has been pre-coated with an antibody specific to VTN. Standards or samples are added to the appropriate micro CLIA plate wells and combined with the specific antibody. Then a biotinylated detection antibody specific for VTN and Avidin-Horseradish Peroxidase (HRP) conjugate is added to each micro plate well successively and incubated. Free components are washed away. The substrate solution is added to each well. Only those wells that contain VTN, biotinylated detection antibody and Avidin-HRP conjugate will appear fluorescence. The Relative light unit (RLU) value is measured spectrophotometrically by the Chemiluminescence immunoassay analyzer. The RLU value is positively associated with the concentration of VTN. You can calculate the concentration of VTN in the samples by comparing the RLU value of the samples to the standard curve.
