

## Mouse HMGB-1 (High mobility group protein B1) CLIA Kit | HMGB-1 clia kit

Mouse HMGB-1 (High mobility group protein B1) CLIA Kit

CATALOG #  
**AAA170932**

REACTIVITY  
**Mouse**

### PRODUCT SYNONYMS

HMGB-1 (High mobility group protein B1); Mouse HMGB-1 (High mobility group protein B1) CLIA Kit; HMGB1; HMG1; HMG3; SBP-1; Amphoterin; HMGB-1 clia kit

### PRODUCT SPECIFICATIONS

|                 |                                                                                                                                                |
|-----------------|------------------------------------------------------------------------------------------------------------------------------------------------|
| Reactivity      | Mouse                                                                                                                                          |
| Specificity     | This kit recognizes natural and recombinant HMGB-1. No significant cross-reactivity or interference between HMGB-1 and analogues was observed. |
| Sequence Length | 215                                                                                                                                            |
| Assay Type      | Sandwich                                                                                                                                       |
| Detection Range | 7.813-500pg/mL                                                                                                                                 |
| Sensitivity     | Min: 4.688pg/mL; Max: 500pg/mL                                                                                                                 |

### ADDITIONAL INFORMATION

#### Related Product Information for HMGB-1 clia kit

**Intended Uses:** This CLIA kit applies to the in vitro quantitative determination of HMGB-1 concentrations in serum, plasma and other biological fluids.

**Principle of the Assay:** This kit uses Sandwich-CLIA as the method. The micro CLIA plate provided in this kit has been pre-coated with an antibody specific to HMGB-1. Standards or samples are added to the appropriate micro CLIA plate wells and combined with the specific antibody. Then a biotinylated detection antibody specific for HMGB-1 and Avidin-Horseradish Peroxidase (HRP) conjugate is added to each micro plate well successively and incubated. Free components are washed away. The substrate solution is added to each well. Only those wells that contain HMGB-1, biotinylated detection antibody and Avidin-HRP conjugate will appear fluorescence. The Relative light unit (RLU) value is measured spectrophotometrically by the Chemiluminescence immunoassay analyzer. The RLU value is positively associated with the concentration of HMGB-1. You can calculate the concentration of HMGB-1 in the samples by comparing the RLU value of the samples to the standard curve.
