ADDITIONAL INFORMATION

Related Product Information for anti-Epsin 2 antibody

This gene encodes a protein which interacts with clathrin and adaptor related protein complex 2, alpha 1 subunit. The protein is found in a brain-derived clathrin-coated vesicle fraction and localizes to the peri-Golgi region and the cell periphery. The protein is thought to be involved in clathrin-mediated endocytosis. alternate splicing of this gene results in multiple transcript variants encoding different isoforms. EPN2 (Epsin 2) is a protein coding gene. Among its related pathways are Sertoli-Sertoli Cell junction Dynamics and Notch signaling pathway (KEGG). GO annotations related to this gene include lipid binding and phospholipid binding. An important paralog of this gene is EPN1
