

Mouse Leu-enkephalin ELISA Kit | Leu-ENK elisa kit

Mouse Leu-enkephalin ELISA Kit

CATALOG #
AAA17265

REACTIVITY
Mouse

PRODUCT SYNONYMS

Leu-enkephalin; Mouse Leu-enkephalin ELISA Kit; Leu-ENK elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Mouse
Specificity	This assay has high sensitivity and excellent specificity for detection of LENK. No significant cross-reactivity or interference between LENK and analogues was observed. NOTE: Limited by current skills and knowledge, it is impossible for us to complete the cross-reactivity detection between LENK and all the analogues, therefore, cross reaction may still exist in some cases.
Samples	Serum, plasma, cell culture supernatants, body fluid and tissue homogenate
Assay Type	Quantitative Competitive
Sensitivity	1.0 pg/mL
Preparation and Storage	Store all reagents at 2-8 degree C.

ADDITIONAL INFORMATION

Related Product Information for Leu-ENK elisa kit	Intended Uses: This LENK ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Mouse LENK. This ELISA kit for research use only, not for therapeutic or test applications! Principle of the Assay: LENK ELISA kit applies the competitive enzyme immunoassay technique utilizing a polyclonal anti-LENK antibody and an LENK-HRP conjugate. The assay sample and buffer are incubated together with LENK-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the LENK concentration since LENK from samples and LENK-HRP conjugate compete for the anti-LENK antibody binding site. Since the number of sites is limited, as more sites are occupied by LENK from the sample, fewer sites are left to bind LENK-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The LENK concentration in each sample is interpolated from this standard curve.

NCBI AND UNIPROT INFORMATION

NCBI GI #	627114
NCBI Official Full Name	Leu-enkephalin - blue mussel

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
