

Mouse Met-enkephalin ELISA Kit | Met-ENK elisa kit

Mouse Met-enkephalin ELISA Kit

CATALOG #
AAA17277

REACTIVITY
Mouse

PRODUCT SYNONYMS

Met-enkephalin; Mouse Met-enkephalin ELISA Kit; Met-ENK elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Mouse
Specificity	This assay has high sensitivity and excellent specificity for detection of MENK. No significant cross-reactivity or interference between MENK and analogues was observed. NOTE: Limited by current skills and knowledge, it is impossible for us to complete the cross-reactivity detection between MENK and all the analogues, therefore, cross reaction may still exist in some cases.
Assay Type	Quantitative Competitive
Samples	Serum, plasma, cell culture supernatants, body fluid and tissue homogenate
Sensitivity	1.0 pg/mL
Preparation and Storage	Store all reagents at 2-8 degree C.

ADDITIONAL INFORMATION

Related Product Information for Met-ENK elisa kit	Principle of the Assay: MENK ELISA kit applies the competitive enzyme immunoassay technique utilizing a polyclonal anti-MENK antibody and an MENK-HRP conjugate. The assay sample and buffer are incubated together with MENK-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the MENK concentration since MENK from samples and MENK-HRP conjugate compete for the anti-MENK antibody binding site. Since the number of sites is limited, as more sites are occupied by MENK from the sample, fewer sites are left to bind MENK-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The MENK concentration in each sample is interpolated from this standard curve. Intended Uses: This MENK ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Mouse MENK. This ELISA kit for research use only, not for therapeutic or diagnostic applications!

NCBI AND UNIPROT INFORMATION

NCBI GI #	554541
NCBI Official Full Name	Met-enkephalin, partial

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
