

Human Apelin ELISA Kit

Human Total Apelin (Apelin) Elisa kit

CATALOG #
AAA17297

REACTIVITY
Human

PRODUCT SYNONYMS

Apelin; Human Total Apelin (Apelin) Elisa kit; Apelin elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Human
Specificity	This assay has high sensitivity and excellent specificity for detection of Apelin. No significant cross-reactivity or interference between Apelin and analogues was observed. NOTE: Limited by current skills and knowledge, it is impossible for us to complete the cross-reactivity detection between Apelin and all the analogues, therefore, cross reaction may still exist in some cases.
Assay Type	Quantitative Competitive or Sandwich
Samples	Serum, plasma, cell culture supernatants, body fluid and tissue homogenate
Sensitivity	1.0 pg/mL
Preparation and Storage	Store all reagents at 2-8 degree C.

ADDITIONAL INFORMATION

Related Product Information for Apelin elisa kit	Principle of the Assay: Apelin ELISA kit applies the quantitative sandwich enzyme immunoassay technique. The microtiter plate has been pre-coated with a monoclonal antibody specific for Apelin. Standards or samples are then added to the microtiter plate wells and Apelin if present, will bind to the antibody pre-coated wells. In order to quantitatively determine the amount of Apelin present in the sample, a standardized preparation of horseradish peroxidase (HRP)-conjugated polyclonal antibody, specific for Apelin are added to each well to "sandwich" the Apelin immobilized on the plate. The microtiter plate undergoes incubation, and then the wells are thoroughly washed to remove all unbound components. Next, substrate solutions are added to each well. The enzyme (HRP) and substrate are allowed to react over a short incubation period. Only those wells that contain Apelin and enzyme-conjugated antibody will exhibit a change in color. The enzyme-substrate reaction is terminated by addition of a sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450 nm. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The Apelin concentration in each sample is interpolated from this standard curve. Intended Uses: This Apelin ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Human Apelin. This ELISA kit for research use only, not for therapeutic or diagnostic applications!
