ADDITIONAL INFORMATION

Related Product Information for anti-DDT antibody

DDT (D-Dopachrome Tautomerase) is a Protein Coding gene. Diseases associated with DDT include Disuse Amblyopia. GO annotations related to this gene include dopachrome isomerase activity and D-dopachrome decarboxylase activity. An important paralog of this gene is DDTL. D-dopachrome tautomerase converts D-dopachrome into 5, 6-dihydroxyindole. The DDT gene is related to the migration inhibitory factor (MIF) in terms of sequence, enzyme activity, and gene structure. DDT and MIF are closely linked on chromosome 22.
