ADDITIONAL INFORMATION

Related Product Information for anti-CHRD antibody	CHRD (Chordin) is a Protein Coding gene. Diseases associated with CHRD include Cornelia De Lange Syndrome. Among its related pathways are Mesodermal Commitment Pathway and TGF-beta signaling pathway (KEGG). GO annotations related to this gene include heparin binding and syndecan binding. An important paralog of this gene is CHRD.L2.This gene encodes a secreted protein that dorsalizes early vertebrate embryonic tissues by binding to ventralizing TGF-beta-like bone morphogenetic proteins and sequestering them in latent complexes. The encoded protein may also have roles in organogenesis and during adulthood. It has been suggested that this gene could be a candidate gene for Cornelia de Lange syndrome. Reduced expression of this gene results in enhanced bone regeneration. Alternative splicing results in multiple transcript variants. Other alternative splice variants have been described but their full length sequence has not been determined.
