ADDITIONAL INFORMATION

Related Product Information for TrkB/NTRK2 active protein	Protein Construction: Recombinant Human TrkB is produced by our mammalian expression system and the target gene encoding Cys32-His430 is expressed with a 6His tag at the C-terminus. Background: The TRK Family of Tyrosine Kinase Receptor consists of 3 members: TrkA, TrkB and TrkC. The three TRK family proteins have different ligand specificities. They connect to different neurotrophins, including NGF, BDNF, NT-3/NT-4/5. TRKA binds NGF, TRKB binds BDNF and NT-3, TRKC binds NT-4/5. At the protein sequence level, human and rat TRKB have greater than 90% sequence identity and the proteins exhibit cross-species activity. TRKB is primarily expressed in the nervous system and it also expression in a wide variety of tissues with low levels.
