ADDITIONAL INFORMATION

Related Product Information for anti-EMSY antibody	Regulator which is able to repress transcription, possibly via its interaction with a multiprotein chromatin remodeling complex that modifies the chromatin. Its interaction with BRCA2 suggests that it may play a central role in the DNA repair function of BRCA2. As part of a histone H3-specific methyltransferase complex may mediate ligand-dependent transcriptional activation by nuclear hormone receptors.
Product Categories/Family for anti-EMSY antibody	Cancer; Epigenetics and Nuclear Signaling
