ADDITIONAL INFORMATION

Related Product Information for anti-EPST11 antibody	EPST11 (Epithelial-stromal interaction protein 1), also known as BRESI1, is a 318 amino acid protein that is highly expressed in spleen, placenta, small intestine, liver, kidney, thymus, testis and salivary gland. Existing as three isoforms that are formed due to alternative splicing events, EPST11 is weakly expressed in normal breast tissue, but is heavily up-regulated in breast carcinoma, suggesting an important role for EPST11 in tumor formation and/or progression. Additionally, EPST11 is found in blood cells from systemic lupus erythematosus (SLE)-afflicted patients, implicating EPST11 as a potential protein involved in SLE.
