ADDITIONAL INFORMATION

Related Product Information for anti-BLM antibody	The Bloom syndrome gene product is related to the RecQ subset of DExH box-containing DNA helicases and has both DNA-stimulated ATPase and ATP-dependent DNA helicase activities. Mutations causing Bloom syndrome delete or alter helicase motifs and may disable the 3'-5' helicase activity. The normal protein may act to suppress inappropriate recombination.
Product Categories/Family for anti-BLM antibody	Cancer; Epigenetics and Nuclear Signaling
